AutoCAD (Updated 2022)

MacroLanguage AutoCAD has a macro language called MacroLanguage which has three levels of definition. The lowest level, called the host environment or type library, is what makes AutoCAD usable from VBA, Visual Basic for Applications. This includes AutoLISP, Visual LISP, and Visual Basic Script. It is available for both Windows and Mac OS X. The second level, called the application macro level, is used to write AutoCAD's built-in macros. This is referred to as automation, and this is used to automate AutoCAD, which is not possible at the host environment level. This is available for both Windows and Mac OS X. The highest level of definition, called the level 1 macro level, is used to write macros that are actually AutoCAD calls. This is referred to as VBA. It is available for Windows only. The AutoLISP macros are implemented in an editor program called CodeViewer. AutoCAD 2007 introduced the ability to write AutoLISP code in a separate editor from the one used to create and edit the code. This provides a faster writing environment. AutoLISP and Visual LISP The lowest level of customization is available in AutoLISP (a subset of Lisp) or Visual LISP. AutoLISP is a proprietary programming language that runs on AutoCAD's host environment. AutoLISP allows creating macros, scripts, and functions that can interact with AutoCAD's commands. Visual LISP is a visual programming language that runs on the host environment. Visual LISP includes Visual Basic Script, which allows creating macros, scripts, and functions that interact with AutoCAD's commands. Visual LISP also allows data management through the use of scripting, loops, and multiple files. Visual Basic Script AutoLISP and Visual LISP are used to automate some of the more basic elements of AutoCAD. However, AutoCAD's features are not completely accessible through those languages. This leaves the need to combine AutoLISP and Visual LISP with the AutoCAD API for full access to AutoCAD's many features. AutoCAD VBA AutoCAD 2007 introduced a Visual Basic for Applications programming language called AutoCAD VBA. AutoCAD VBA is a completely separate programming language that allows programming in the Visual Basic environment. AutoCAD VBA is used to program a1d647c40b
